List & Act

Total Cost : \$80 Quality Score : 80%

Performance: 97% 
Security: 42% 

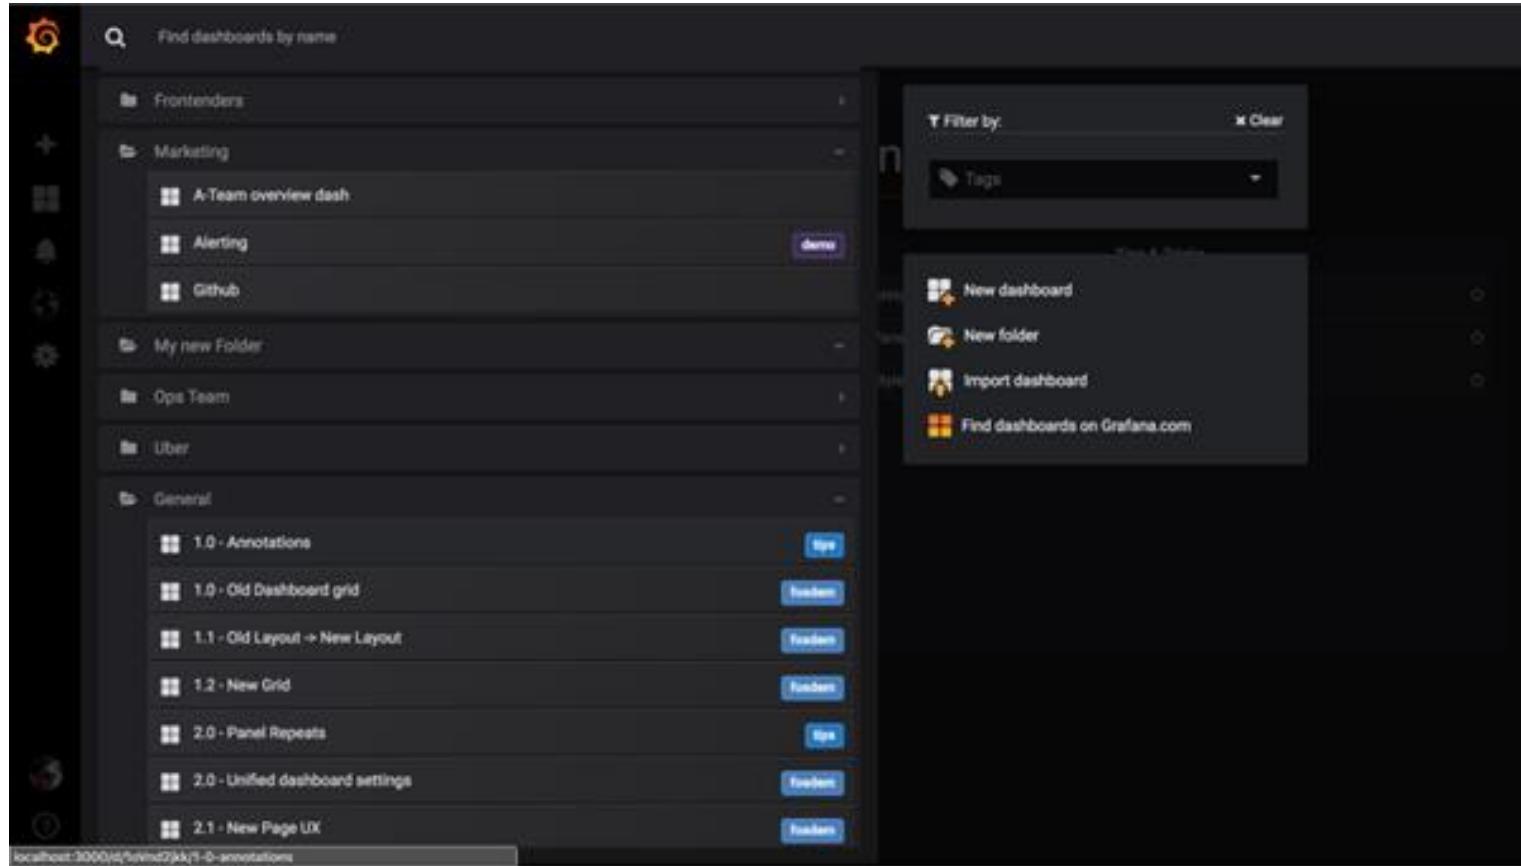

Availability: 77% 
End Usage: 59% 

Reliability: 39% 

| Service Type | Services | Service Type | Location |
|---------------|----------------|------------------|------------------------|
| App Services | App Service 1 | Common Service | Kubernetes Cluster |
| | App Service 2 | Common Service | Kubernetes Cluster |
| | App Service 3 | Business Service | Cloud Managed Services |
| | App Service 4 | Business Service | Cloud Managed Services |
| Data Services | Data Service 1 | Business Service | Cloud Managed Services |
| | Data Service 2 | Common Service | Lambda |
| | Data Service 3 | Common Service | Lambda |

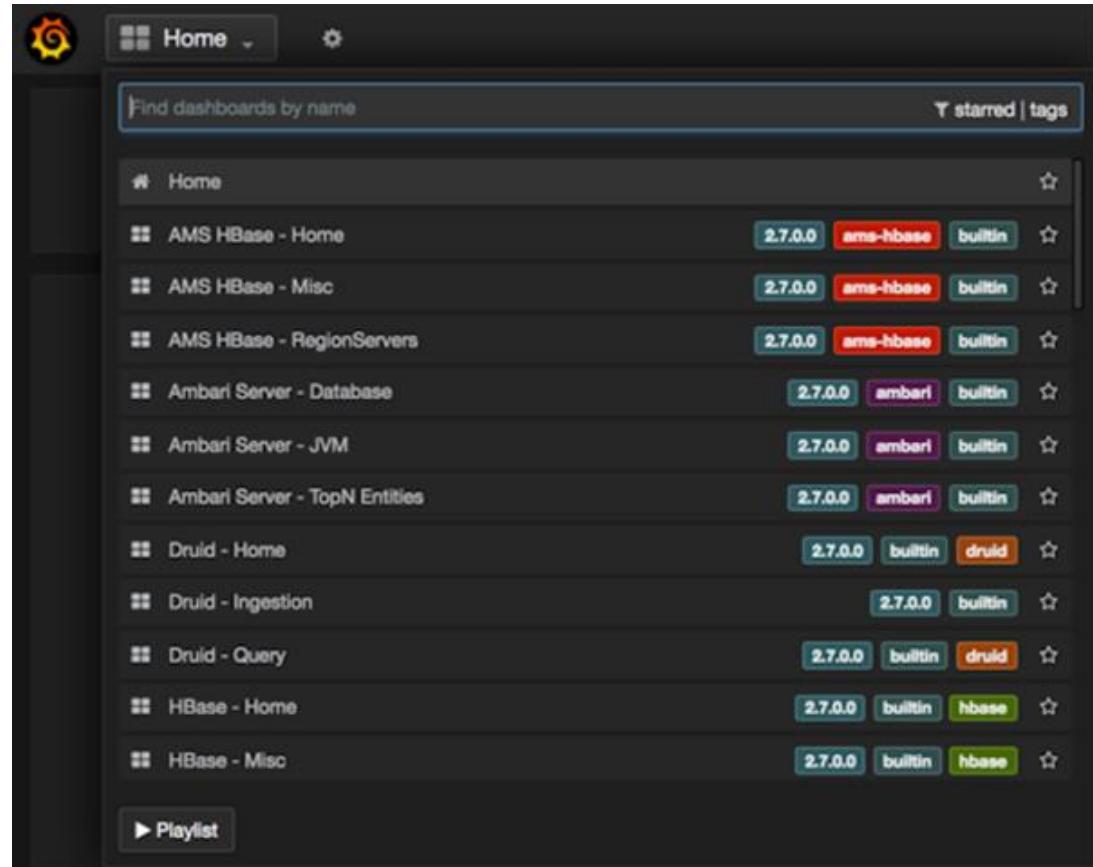

Each Env has 50+ App services, 25+ Data Services –
Clustered / Cloud Managed App services (K8 + Lambda)

A Vanilla Grafana

Challenges

1. Need a purpose-built solution to address microservice architecture
2. Lack structure
DEPT->PRODUCTS->ENVS->SERVICES

Effort Analysis for Operation Setup – vanilla grafana

| Provisioning Data (Metrics / Log / Trace) Collection Framework for each Services | 2 Weeks |
|---|---------|
| Design and Implement Perf / Availability / Reliability / Security / End Usage Dashboards for Services | 8 Weeks |
| Design and Implement SLA alerts and integrate them with alert management platform | 1 Week |
| Integrate Alert Management and Services Desk Platform | 1 Week |

Our Solution

- Delivered logical structure on top of Grafana – induced org structure
- Delivered a separate catalogue of Performance / Availability / Reliability / Security / end Usage
- 1 Click enablement
- It can be used as a Grafana plugin or independent setup.
- Extension Unlimited

Effort Analysis for Operation Setup

| Provisioning Data (Metrics / Log / Trace) Collection Framework for each Services | 2 Weeks |
|---|---------|
| Tests and verification | 2 Weeks |

Final ROI

| Typical Grafana Way | 12 Weeks |
|---------------------------|----------|
| Automated Operation Setup | 4 Weeks |
